Luckily the new use is only for TX and FL so that will help.

You may need to check with BEAD because you will need state level PCT and I think they need to allocate in some fashion. Upshot is double check to make sure its in the right format. Mark Suarez and Claire will know

Thanks. We have some PCT data from BEAD, I just can't recall if it's only for the proposed new use (projected PCT) or all the registered crops (there aren't that many for aldicarb).

I reach out to Josh and cc you all.

Amy

I don't think you need any EISB help. The tools to automate this are done. if you wanted any mapping of watersheds that would be them but I would wait on that.

Assuming Jean is OK with Josh's time I would suggest you send a note to Josh and Bill and cc me and Jean. They should be able to walk you through the process.

Do you already have PCT data? You will need that to do PCT part otherwise you can start with just using the distribution of PCA values. I think for chlorpyrifos the PCA by itself really focused the assessment in on select areas

Hi,

I've been asked to continue exploring the PCA/PCT work for our new use on citrus with aldicarb. Is the team ready to engage with us? So in discussing with you previously, you indicated that Josh could help on some aspects. Also do we need EISB (Summathy?). While this action has been supported by BEAD for some of the PCA/PCT, I'm not sure if we have all we need from them, so having an idea of what is really needed from them would be helpful.
